

# CPower Capacity Plus+

Multiply Incentives by "Stacking" Flexible PJM Demand Response Programs

## EMERGENCY CAPACITY

Simplest and most widely used demand response program assures systemwide grid reliability.

- CPower has largest capacity (MW) portfolio to ensure customers receive all revenues desired.
- CPower identifies the capability of each facility to shed load while meeting the unique needs of each customer.

## SYNCHRONIZED RESERVES

Short duration and high revenue demand response program addresses local power imbalances.

- Typically only 3-hours of dispatch per year lasting no longer than 30-minutes at a time.
- Little to no customer effort required as CPower performs remote dispatch.

## ECONOMIC

An hourly arbitrage program that pays revenues, offsets high power prices, and keeps electricity affordable.

- Choose specific hours acceptable for participation.
- Participate only when compensation outweighs cost.

## FREQUENCY

Pays highest levels of revenues to maintain all-important 60 Hz alternating current frequency for the grid.

- An absolute "must" for any facility with batteries.
- Opt out when batteries needed for another purpose or unavailable.

***CPower is unique in the demand response industry in terms of our ability to provide all PJM demand response programs.***

***Your organization can stack multiple PJM programs through CPower to obtain significant, additional sources of demand response revenues.***
