

◆ CONNECT INTELLIGENCE

Connect Intelligence forecasts, stacks, and optimizes the highest-value grid programs across your sites, assets and portfolio.

WHY IT MATTERS

Most platforms forecast one program at a time. Intelligence does them all.

Connect Intelligence is where compounding value comes from. Instead of optimizing a single program in isolation, Connect Intelligence finds the value most providers leave on the table, by stacking programs, optimizing your assets in the energy markets and continuously improving performance.

WHAT INTELLIGENCE GIVES YOU

Capabilities that increase value while removing man-hours and risk

- Digital twin models the long-term value of your sites and assets before you commit.
- Intelligently stack multiple demand response and bill savings programs to gain more value – in real time, without manual intervention.
- Realize as much as 2-3 times the financial value versus single program participation.
- Built-in operational constraints ensure your participation never impacts your core operations.
- Optimization removes complexity by handling all market and pricing signal changes – so you don't have to.

HOW CONNECT INTELLIGENCE WORKS

As you participate, Connect Intelligence gets smarter and you earn more

Connect Intelligence is proprietary software using advanced data science and machine learning. It receives thousands of market, program, pricing, site, meter, asset info and signals and models all possible participation scenarios your sites and assets could do in its digital twin.

It then selects the best possible outcomes with the most savings and revenue potential, while respecting pre-defined operational constraints. The optimization engine then takes over and achieves the selected model's outcomes. It continues to learn and finds more financial opportunities as you participate – showing you the results in real time.

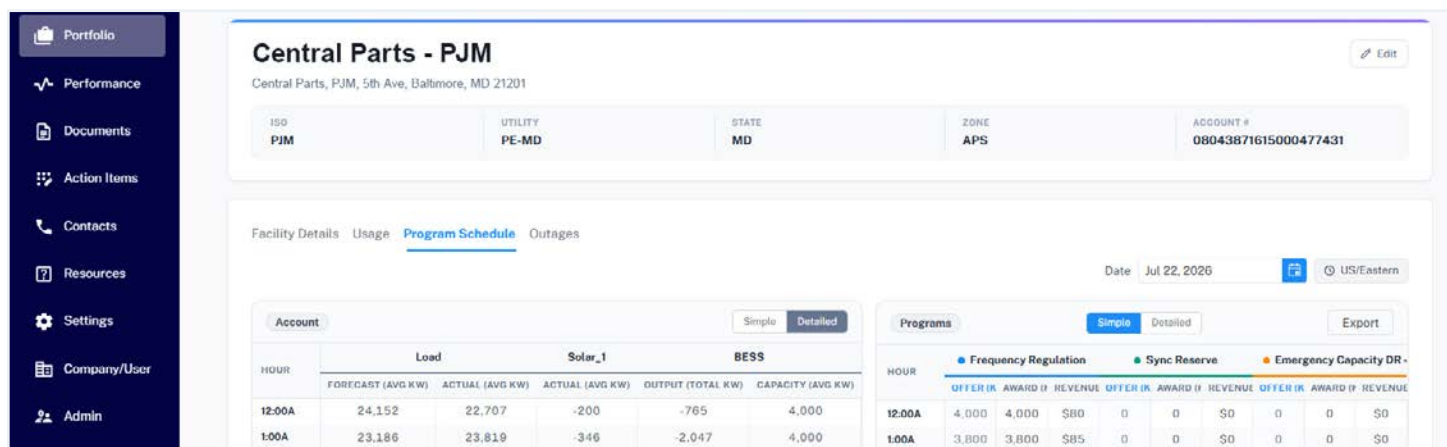

GET MORE VALUE WITH INTELLIGENCE

Find more value from your energy assets than you thought possible.

See what’s possible and understand the full value of your assets before you commit. Know your results in real time. Connect Intelligence is the smart way to maximize your value from the grid and your energy assets.

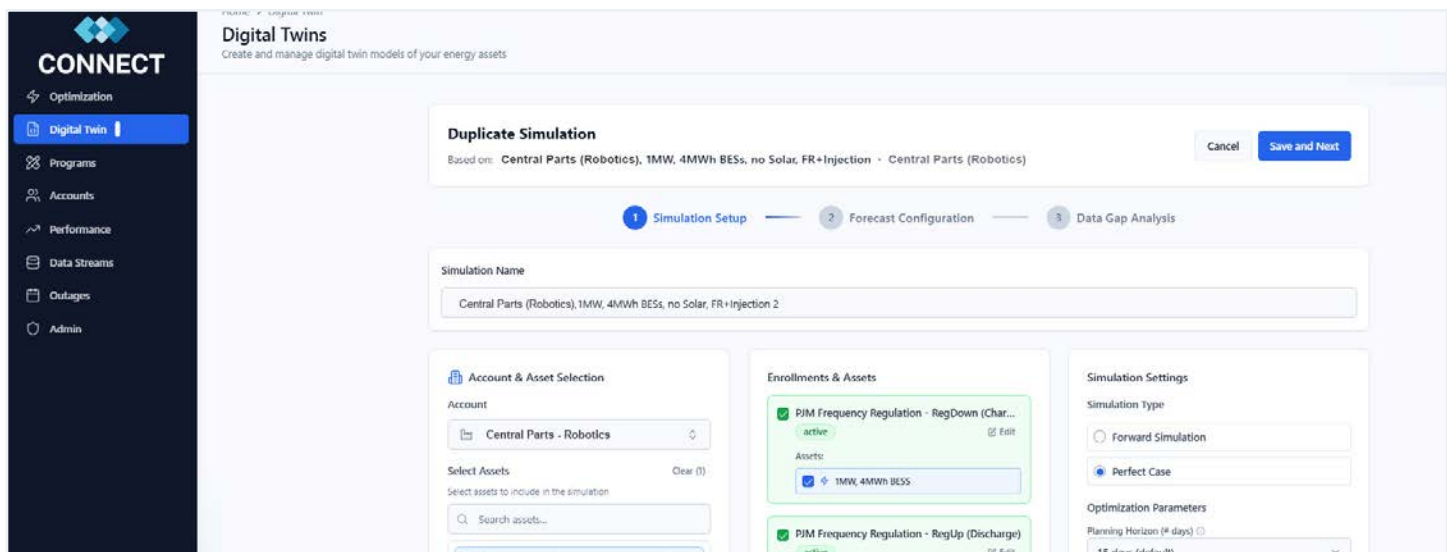

CONNECT INTELLIGENCE OPTIMIZATION ENGINE

Real-time visibility into your participation, bids and compounded, optimized earnings.

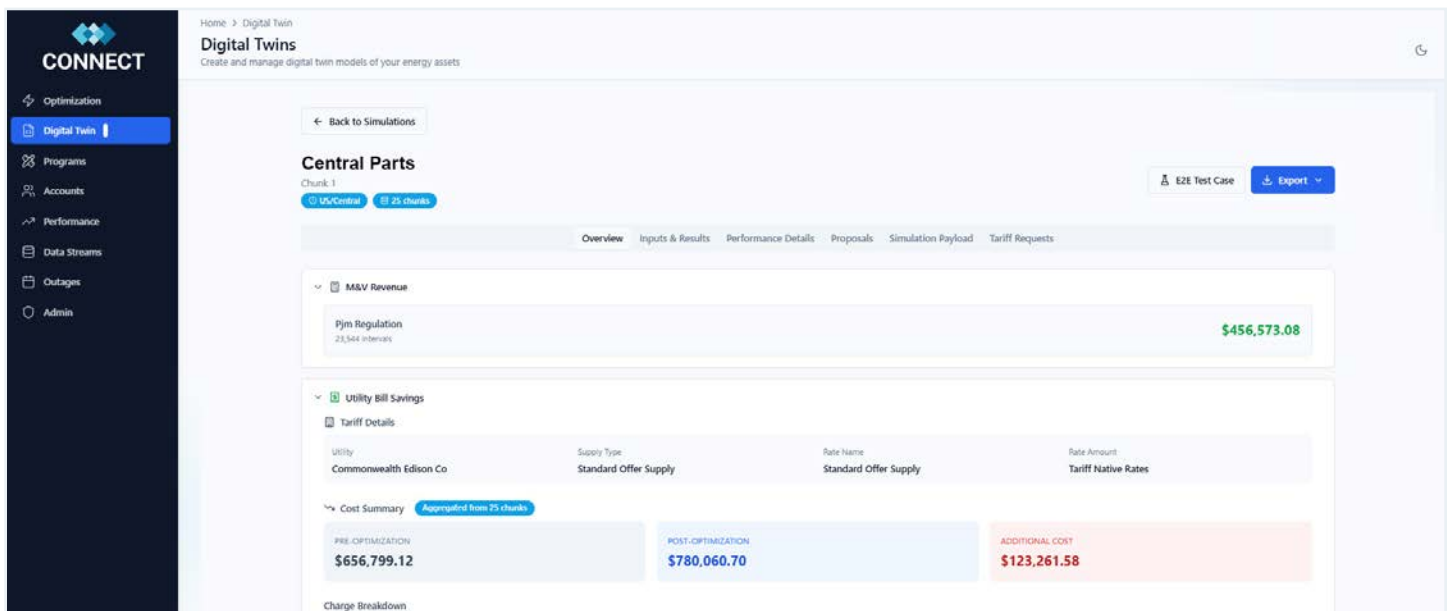

CONNECT INTELLIGENCE DIGITAL TWIN SIMULATION

Endless scenarios that model how your sites and assets can perform within your capabilities and constraints.

CONNECT INTELLIGENCE DIGITAL TWIN OUTCOME

See how much you will earn now and in the future in a detailed, annualized proforma before you commit.

THERE'S MORE TO CONNECT

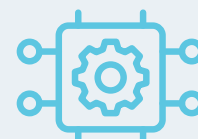

Connect Intelligence is the “Decide” layer of CPower Connect – the leading platform for grid-connected assets.

Connect Intelligence forecasts, stacks, and optimizes the highest-value programs across your portfolio. Connect Command and Connect Hub complete the platform and allow you to see all your information in one central location and automate your demand response participation. CPower Connect compounds earnings and automates with no upfront cost.
