CONNECT COMMAND

Connect Command automates asset and performance data, participation and optimization across assets, while you maintain total control of your customer experience.

WHY IT MATTERS

Connect Command turns decisions into action

Connect Command automates participation across assets — managing the site-specific signals each asset needs to respond correctly and realize the most revenue and savings. Without Connect Command, operating energy assets is too manual, risky, time constrained and demanding.

Data and demand response participation information should reside in your system and not require you to learn and manage a separate application or spend weeks integrating and configuring. Connect Command automates data and dispatch while you retain your own customer experience.

WHAT CONNECT COMMAND GIVES YOU

Capabilities that increase value while removing man-hours and risk

- Automation in place in as little as one day with flexible integration patterns, self-service API interface and seamless onboarding.
- Never miss a dispatch or underperform with fully-flexible automation logic built in.
- Bi-directional telemetry ensures all data and signals you need are there when you need them across any energy asset.
- Leverage your own energy management platform to visualize all your performance, historic-and-real time events, schedule info and payment information from Connect Command.

HOW CONNECT COMMAND WORKS

Your ideal customer experience, delivered through CPower APIs

Connect Command is a secure set of APIs developed by CPower. Your team utilizes a guided, self-service API setup and testing environment so you can ensure full operational accuracy before you go live.

Connect Command receives event dispatch and asset control signals from various ISO and utility systems as well as from Connect Intelligence as needed, abstracts the complexity of multi-market automation and delivers those signals and data as instructed through the APIs directly and securely into your systems and assets.

No need for another platform, integration or code development

Connect Command has the ability for CPower to send all performance, dispatch, bidding, payment and scheduling information to your own system. This means you and your customers will not need to learn or manage a new system to get the same valuable insights and data CPower's customers do through Connect Hub. We provide the data; you deliver the customer experience.

CONNECT COMMAND SANDBOX

A fully functional environment where you can build and test against live APIs. Sign up in one minute and carry your configurations automatically once you have a production account.

THERE'S MORE TO CONNECT

Connect Command is the "Act" layer of CPower Connect – the leading platform for grid-connected assets

Connect Command automates demand response and peak management data, participation and optimization across sites and assets while you focus on your customer experience. Connect Intelligence completes the platform and allows you to fully optimize and forecast the value of your energy assets. Fully integrate in as little as one day with no additional out-of-pocket costs.
